PERSONAL INFORMATION

Birth Date
03/02/2000
Gender
Male

RESUME

At the age of 11-12, I got into software as a hobby without realizing it. After I really got to know software in 2016, I improve my skill and still continue. At the time, I was developing desktop applications for myself and the people around me. Later, after joining the company called Gonca Grubu, I improved myself in the Front-End section.

EXPERIENCES

- **2018 - Present**

  Gonca Grubu
  İstanbul/Kağıthane
  As Front-End Developer, I was preparing mobile application and website designs for hotels.

EDUCATION

- **2015 - 2017**

  Tekirdağ Vocational and Technical Anatolian High School
  Tekirdağ/Süleymanpaşa
  I had a C# based education in the software department.

- **2019 - 2021**

  Correspondence High School
  I completed my school, which I had to leave due to certain reasons, with correspondence high school.

MY INTERESTS

Travelling

Games
specially survival or
Strategy based games.

Cooking

Searching
Mostly new techs and
space

PROJECTS

2017   **LUCY**
It is a switch-case based program written in C #
language that I have prepared as a hobby for
myself. The speech library is my program that
translates my translated voice into text, controls
the translated text and warns the defined texts
after action with a voice key. Then I created a
broadcast between arduino and C # and connected
it to the desk lamp.

2018-2019   **MERT GÜLER MOBILE APP**
Gonca Grubu
ionic 3 is a mobile application prepared using Push
notification and socket structure.

2018-Present   **MOBEX**
Gonca Grubu
It is the name given to the general hotel
applications under the name of Gonca Group in Ios
and Android markets. At first, I decided to switch
to ionic 4 as a new technology, even though I
came out to be shaped in accordance with the
data coming with the ionic 3 architecture. The
application shapes itself according to the data
coming from a single code and takes shape
according to the user's wishes.
